The data story explores various aspects of education using different datasets. Firstly, a histogram is created to display the distribution of literate ages worldwide over a specific timeframe. It shows the rates of literacy across different age groups.

Next, a bar chart is generated to highlight countries that have literacy rates significantly below the mean. This chart helps identify countries that may require more attention and support in improving literacy.

Lastly, a bar chart focuses on the literacy rate among females, specifically in the young age group. This visual representation allows for a comparison of female literacy rates across different countries.

Overall, the data story reveals patterns and correlations related to literacy rates, emphasizing countries with low rates and highlighting the literacy situation among females in the young age group.
